(cont.)*
67
cont

effecting post-translational modification of said
expression product as necessary for obtaining said
polypeptide; and
isolating said polypeptide.

62 *SUB
7/12* 68 (Amended). A method for producing a polypeptide
that binds to TRAF2 and modulates the activity of NF- κ B,
comprising:

growing transformed host cells in accordance with
claim 67 under conditions for the expression of an expression
product from said cells;

effecting post-translational modification of said
expression product as necessary for obtaining said
polypeptide; and

isolating said polypeptide.
